Project: MLA Citizen Case Management System (CCMS)

1. Project Overview

The MLA Citizen Case Management System (CCMS) is a centralized web-based application designed to digitally manage all citizen grievances, requests, applications, and follow-ups received at the MLA office.

Instead of maintaining physical registers and paper files, the entire workflow will be managed digitally—from citizen registration to case closure.

1. Executive Summary

The proposed MLA E-Office is a cloud-based digital constituency management platform designed to manage all MLA office activities through a centralized Laravel web application and React Native mobile application. The solution digitizes citizen services, office administration, development work, legislative activities, communication, reporting, and analytics.

2. Objectives

- Digitize MLA office operations
- Paperless inward/outward management
- Track every citizen request
- Monitor development works
- Manage booth, village and city level data
- Manage staff and workers
- AI-assisted workflow
- Citizen communication through WhatsApp/SMS

3. System Architecture

- Laravel Web Admin Portal
- React Native Android & iOS App
- REST API Layer
- MySQL/PostgreSQL Database
- Cloud Storage

- Notification Services
- Role Based Access Control

4. User Roles

- MLA
- Super Admin
- Office Admin
- PA
- Office Staff
- Development Officer
- Field Officer
- Booth Worker
- Village Coordinator
- Citizen (Future Portal)

5. Project Flow

Citizen Grievance Flow

Citizen -> Office/Worker -> Application Entry -> Unique Inward Number -> Assign Department -> Follow-up -> Status Update -> Completion -> Citizen Notification

Inward Flow

Receive Document -> Scan Upload -> Generate Tracking ID -> Assign Staff -> Follow-up -> Close

Outward Flow

Create Official Letter -> Generate Outward Number -> Approval -> Print/PDF -> Dispatch -> Delivery Status

Development Work Flow

Proposal -> Approval -> Budget -> Tender -> Work Started -> Site Inspection -> Progress Updates -> Completion

Meeting Flow

Appointment -> Visitor Registration -> Meeting -> Notes -> Follow-up

Assembly Flow

Issue Collection -> Question Preparation -> Department Reply -> Assembly Session -> Archive

Worker Flow

Task Assigned -> Field Visit -> Mobile Update -> Photo/GPS Upload -> Review

6. Functional Modules

- Dashboard
- Citizen Grievance
- Inward Management
- Outward Management
- Visitor Management
- Calendar
- Development Work
- Assembly (Adhiveshan) Management
- Booth Management
- Village & City Master
- Worker Management
- Office Staff Management
- Officer Directory
- Reports & Analytics
- Notifications
- AI Assistant

7. Reports

- Date Range Reports
- Year-wise Reports
- Booth-wise
- Village-wise
- City-wise
- Department-wise
- Worker-wise
- Development Progress

- Pending Cases
- Performance Dashboard

8. Mobile Features

- Citizen Registration
- Photo Upload
- Offline Data Capture
- Push Notifications
- WhatsApp Sharing
- Project Progress
- Task Updates

9. Technology Stack

- Backend: Laravel 12
- Frontend: Blade/React (Admin UI)
- Mobile: React Native
- Database: MySQL/PostgreSQL
- Authentication: JWT/Sanctum
- Cloud: AWS/Azure
- Storage: S3 Compatible
- API: REST

10. Security

- Role Based Access
- Audit Logs
- Encrypted Passwords
- Daily Backup
- SSL
- Activity Logs

11. Deliverables

- Laravel Web Application
- React Native Android App
- React Native iOS App
- REST APIs
- Database Design
- Deployment
- Training
- Technical Documentation
- Source Code

---

13. Client-Side Charges

The following third-party services, subscriptions, and infrastructure expenses shall be arranged and borne directly by the client:

- Cloud server, hosting infrastructure, and database hosting
- Domain registration and SSL certificate purchases
- AI service subscriptions (OpenAI, Azure OpenAI, Gemini, or equivalent)
- Email delivery services (SMTP, Amazon SES, etc.)
- SMS gateway credits
- WhatsApp Business API charges
- Push notification services (if applicable)
- Any government or regulatory registration fees, if applicable

Conclusion

The proposed **MLA Citizen Case Management System (CCMS)** is a comprehensive digital governance platform that streamlines the registration, assignment, tracking, and resolution of citizen grievances. By centralizing all case information, enabling role-based workflows, automating follow-ups, and providing real-time dashboards, it empowers the MLA and office staff to deliver faster, more transparent, and accountable public service. The architecture is scalable, secure, and future-ready, allowing seamless integration with mobile applications, AI-powered assistance, and government services as the project evolves. This solution will significantly improve operational efficiency while enhancing citizen satisfaction and trust in constituency services.
